

DSA Project Documentation

Terminal Typing Master

Objective:

To develop a terminal-based typing test application. The application tests the user's typing speed by presenting a list of random words from a selected category and measures metrics like words per minute (WPM).

Program:

```
import random

import json

import time

import os

WORD_FILE='words.json'

LEADERBOARD_FILE='leaderboard.json'

def load_words_from_json(filename):

    with open(filename,'r') as file:

        words_data=json.load(file)

    return words_data

def update_leaderboard(username,wpm):

    leaderboard=load_leaderboard()

    user_exists=False

    for entry in leaderboard:

        if entry['username']==username:

            entry['wpm']=wpm

            user_exists=True

            break

    if not user_exists:
```

```

        leaderboard.append({'username':username,'wpm':wpm})

leaderboard.sort(key=lambda x:x['wpm'],reverse=True)

with open(LEADERBOARD_FILE,'w') as file:

    json.dump(leaderboard,file,indent=4)

def load_leaderboard():

    if os.path.exists(LEADERBOARD_FILE):

        with open(LEADERBOARD_FILE,'r') as file:

            leaderboard=json.load(file)

        return leaderboard

    else:

        return []

def get_user_input(prompt):

    user_input=input(prompt)

    return user_input

def start_typing_test(words):

    username=get_user_input("Enter your username: ")

    start_time=time.time()

    correct_words=0

    total_words=len(words)

    for word in words:

        user_input=get_user_input(f"Type '{word}': ")

        if user_input==word:

            correct_words+=1

    end_time=time.time()

    time_taken=end_time-start_time

    wpm=int((correct_words/time_taken)*60)

    print(f"Words Per Minute (WPM): {wpm}")

    update_leaderboard(username,wpm)

```

```

def show_leaderboard():
    leaderboard=load_leaderboard()
    if not leaderboard:
        print("Leaderboard is empty.")
    else:
        print("Leaderboard:")
        for entry in leaderboard:
            print(f'{entry['username']}: {entry['wpm']} WPM')
def main():
    while True:
        print("\nMenu:")
        print("1.Start Typing Test")
        print("2.Show Leaderboard")
        print("3.Exit")
        choice=get_user_input("Enter your choice: ")
        if choice=='1':
            words_data=load_words_from_json(WORD_FILE)
            words=random.sample(words_data['typing_category'],10)
            start_typing_test(words)
        elif choice=='2':
            show_leaderboard()
        elif choice=='3':
            print("Exiting the Typing Test Application.")
            break
        else:
            print("Invalid choice. Please try again.")
if __name__=="__main__":
    main()

```

Output:

Menu:

- 1.Start Typing Test
- 2.Show Leaderboard
- 3.Exit

Enter your choice: 1

Enter your username: User2

Type 'strawberry': strawberry

Type 'orange': orange

Type 'lemon': lemon

Type 'raspberry': raspberry

Type 'blueberry': blueberry

Type 'papaya': papaya

Type 'apple': apple

Type 'quince': quince

Type 'honeydew': honeydew

Type 'fig': fig

Words Per Minute (WPM): 19

Menu:

- 1.Start Typing Test
- 2.Show Leaderboard
- 3.Exit

Enter your choice: 2

Leaderboard:

User4: 70 WPM

User3: 55 WPM

User4: 20 WPM

User5: 20 WPM

User2: 19 WPM

User1: 18 WPM

Menu:

1.Start Typing Test

2.Show Leaderboard

3.Exit

Enter your choice: 3

Exiting the Typing Test Application.

Terminal-Based Maze Solver

Objective:

To develop a terminal-based application that generates a random maze, finds a path from the start to the end, and visualizes the maze and path in the terminal.

Program:

```
import random

RED="\033[91m"
BLUE="\033[94m"
GREEN="\033[92m"
END_COLOR="\033[0m"
WALL=f"{RED}█{END_COLOR}"
OPEN_SPACE=f"{BLUE}○{END_COLOR}"
START=f"{GREEN}S{END_COLOR}"
END=f"{GREEN}E{END_COLOR}"
PATH=f"{GREEN}●{END_COLOR}"

def generate_maze(n,wall_percentage):
    maze=[[OPEN_SPACE for _ in range(n)] for _ in range(n)]
    num_walls =int(n*n* wall_percentage/100)
    for _ in range(num_walls):
        row,col=random.randint(0,n-1),random.randint(0,n-1)
        maze[row][col]=WALL
    maze[0][0]=START
    maze[n-1][n-1]=END
    return maze

def print_maze(maze):
    for row in maze:
```

```

        print(" ".join(row))
def find_path(maze):
    def is_valid_move(row,col):
        return 0<=row<len(maze) and 0<=col<len(maze[0]) and maze[row][col] in
(OPEN_SPACE,END)
    def dfs(row,col):
        if row==len(maze)-1 and col==len(maze[0])-1:
            return True
        for dr,dc in [(1,0),(0,1),(-1,0),(0,-1)]:
            new_row,new_col=row+dr,col+dc
            if is_valid_move(new_row,new_col):
                if maze[new_row][new_col]==OPEN_SPACE:
                    maze[new_row][new_col]=PATH
                    if dfs(new_row,new_col):
                        return True
                if maze[new_row][new_col]==PATH:
                    maze[new_row][new_col]=OPEN_SPACE
            return False
    if dfs(0,0):
        return True
    else:
        return False
def print_path(maze):
    for row in maze:
        print(" ".join(row))
def main():
    while True:
        n=int(input("Enter the size of the maze(nxn): "))

```

```
